

## GYROCUBE<sup>3F</sup>

Triaxial MEMS IMU Module

### STANDARD FEATURES

- **High Performance MEMS Inertial Sensors**
- **Enhanced Low-Pass Filters**
- **Versatile Analog Interface**
- **On-Board Temperature Monitor**
- **Low Cost**
- **Ultra Compact Package**
- **Low Power Consumption (Single 5V Supply)**

### PRODUCT DESCRIPTION

The Gyrocube3F is a complete three axis silicon MEMS inertial measurement module with analog outputs and enhanced low-pass filters. The Gyrocube3F integrates three MEMS angular rate gyros and three MEMS accelerometers in a triaxial orthogonal configuration. Featuring low bias drift and excellent scale factor stability, these rugged inertial sensor modules are rated for 500g operating and 1000g non-operating shock survival. The Gyrocube3F is packaged in just under one cubic inch of volume. The module requires a single 5V supply and consumes only 195mW.

Angular rate outputs are available in two ranges of  $\pm 150^\circ/\text{s}$  or  $\pm 300^\circ/\text{s}$ , with optional gain, output sensitivities can be configured to  $\pm 15^\circ/\text{s}$  full scale. Acceleration outputs are available in two ranges  $\pm 2g$  or  $\pm 10g$ , with optional gain, output sensitivities to  $\pm 0.5g$  full scale are available. Self test inputs are provided to verify proper operation. Enhanced low-pass filters feature fifth-order Bessel response for improved noise rejection.

Rate and acceleration outputs are buffered to drive up to 30mA. An unbuffered temperature output is also provided for thermal compensation, if desired. Outputs are terminated on a detent-locking header for reliable contact in dynamic environments. The wire-to-board connection allows mounting the module in any orientation. Preassembled cable sets are available for easy system integration.

An evaluation kit is available with everything needed to power and test a Gyrocube3F on a desktop or in your application. The evaluation kit includes a Gyrocube3F, connecting cables, AC power supply and a user manual. An optional digitizer unit is available for serial (RS-232) interfacing to a PC or users' system.

### APPLICATIONS

- Platform Stabilization
- Motion Control Systems
- Inertial Guidance & Navigation
- Vehicle Stabilization & Control
- Antenna Tracking
- Attitude Reference Systems
- Seismic Event Sensing
- Motion Instrumentation
- Virtual Reality Input Sensing
- Vehicle Failsafe Systems

Optional Digitizer/MX A/D Converter Module

### ORDERING INFORMATION

$\pm 150^\circ/\text{s}$ 
 $\pm 300^\circ/\text{s}$ 
2g
10g
40Hz
80Hz

Standard stock configuration is  $\pm 150^\circ/\text{s}$  (40Hz) angular rate &  $\pm 2g$  (60Hz) acceleration. Custom bandwidth and mixed sensitivities/bandwidths are available.

### CUSTOM CONFIGURATIONS

- Custom I/O Header (Removed or Reversed)
- Custom Bandwidth 40-100Hz
- Custom Rate Gain  $\pm 300$  to  $\pm 15^\circ/\text{s}$
- Standard cable / connector sets
- Aluminum Enclosures
